Eames Tables

Charles & Ray Eames, 1964/1968

The design story of the Eames Tables harks back to the 1940s, when Charles and Ray Eames developed the first versions of what later became the table base. Suited for a variety of chairs and tables, these early designs already reflect the couple's characteristic method of thinking in systems. The bases used today for the Eames Tables were created in the 1960s in conjunction with the development of the Soft Pad Chairs.

The Eames Tables are distinguished by their rational construction and aesthetic understatement. For decades they have facilitated communication, teamwork and interaction in offices, public spaces and homes. They meet today's requirements with intelligent power and data solutions and modern technologies such as wireless charging.

This table family comprises the large-surface Segmented Tables and the smaller Contract Tables. High-quality materials guarantee an unusually long product lifespan. The dining table versions are available with a choice of solid wood tops, while all the other models have tops in either HPL with a distinctive rounded black plastic edge, or in a selection of wood veneers. The Eames Contract Tables are also offered with melamine-faced or solid core tops, the latter of which are suited for outdoor use.

Charles & Ray Eames

Charles and Ray Eames are counted among the most important figures of twentieth-century design. Their work spans the fields of furniture design, filmmaking, photography and exhibition design. Vitra is the sole authorised manufacturer of Eames products for Europe and the Middle East. When you own an Eames product made by Vitra, you know it is an original.

Eames Segmented Tables Dining

Charles & Ray Eames, 1964

vitra.

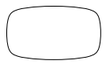

Social gatherings at the home of Charles and Ray Eames were legendary. This was especially true when a meal was served. In addition to planning the meal, Ray immensely enjoyed preparing the table – a round Eames Segmented Table – with the aim of bringing pleasure to each individual guest. The arrangement of tablecloths, tableware, cutlery, vases and decorative objects resembled a freshly painted picture, whose shapes and colours complemented the food that was served, creating what resembled a small piece of art.

Materials

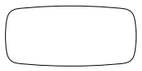

- **Table top:** 25 mm thick, solid wood in oak,natural, oiled finish; oak, dark hard-wax oil finish; American walnut, natural, oiled finish or HPL (high-pressure laminate) surface with black edges.
- **Base:** components for segmented base include legs, spreader connectors, spreaders, columns and spiders. Legs polished or chrome-plated with column in basic dark (RAL 9004), all chrome or all powder-coated (textured finish) in deep black (RAL 9005).
- **Origin of wood:** oak (Quercus robur) from Western Europe and/or Poland; American walnut (Juglans nigra) from the USA.

Eames Contract Tables

Charles & Ray Eames, 1968

For the Contract Tables, Charles and Ray Eames developed the universal base, whose form strongly resembles the bases of the Soft Pad Group, while the structure evokes associations with the larger Eames Segmented Tables.
The Contract Tables make perfect small meeting tables and are also ideal as bistro tables for both indoor and outdoor use. They come with a round top in a choice of two sizes or as a square model.

Materials

- **Table tops:** available in four materials: melamine-faced white surface (25 mm) with smooth, flat plastic edge in white; wood veneer in light oak, lacquer finish or dark oak, lacquer finish (Europe) (25 mm) with flat veneer edge; solid core material in white (12 mm) with black edge; HPL (25 mm) with black edge.
- **Base:** stable pedestal base, four-star legs in die-cast aluminium. Available in four versions: base polished or chrome-plated with column in basic dark (RAL 9004), all chrome or all powder-coated (textured finish) in deep black (RAL 9005) or white (RAL 9010). The height of the base including screw-in glides is 71 cm; the glides can be adjusted (max. extension 10 mm) for levelling on uneven floors.

Outdoor use: version with a powder-coated base and solid core top suitable for utilisation outdoors on a temporary or seasonal basis, following care instructions. After prolonged exposure to the elements, clean and store away in a dry, sheltered place to ensure lasting use and avoid any deterioration in appearance.

Tables High

Eames Contract Tables High

Charles & Ray Eames, 1968

The universal base designed by Charles and Ray Eames for the Contract Tables also exists in a standing-height version. Reminiscent of the bases of the Soft Pad Group in shape, its structure echoes those of the larger Eames Segmented Tables. The Contract Tables High are 110 cm in height and are ideal as small standing meeting tables or as bistro tables for both indoor and outdoor use. They are available with a square top or with a round version in a choice of two diameters.

Materials

- **Table tops:** available in four materials: melamine-faced white surface (25 mm) with smooth, flat plastic edge in white; wood veneer in light oak, lacquer finish or dark oak, lacquer finish (Europe) (25 mm) with flat veneer edge; solid core material in white (12 mm) with black edge; HPL (25 mm) with black edge.
- **Base:** stable pedestal base, four-star legs in die-cast aluminium. Available in four versions: base polished or chrome-plated with column in basic dark (RAL 9004), all chrome or all powder-coated (textured finish) in deep black (RAL 9005) or white (RAL 9010). The height of the base including screw-in glides is 71 cm; the glides can be adjusted (max. extension 10 mm) for levelling on uneven floors.

Outdoor use: version with a powder-coated base and solid core top suitable for utilisation outdoors on a temporary or seasonal basis, following care instructions. Eames Segmented Tables Meeting

Charles & Ray Eames, 1964

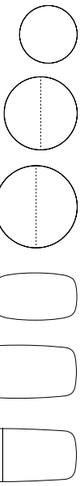

vitra.

In 1964, Charles and Ray Eames developed a system of base elements that enables many different table sizes and shapes, resulting in the elegant Eames Segmented Tables. Due to the versatility of this system, Vitra not only offers six standard table sizes but can also accommodate individual requirements and provide customised solutions.
The Segmented Tables can be equipped with power and data connections as well as wireless charging technology; cables are concealed in the base columns.

Materials

- **Table top:** HPL high-pressure laminate surface (25 mm) with black edge; or oak veneer, light or dark (25 mm), with flat veneer edge.
- **Base:** components for segmented base include legs, spreader connectors, spreaders, columns and spiders. Legs and spreader connectors made of die-cast aluminium, polished, chrome finish or powder-coated; columns and spreaders made of steel, chrome-plated or powder-coated; spiders made of die-cast aluminium, powder-coated.

Electrification

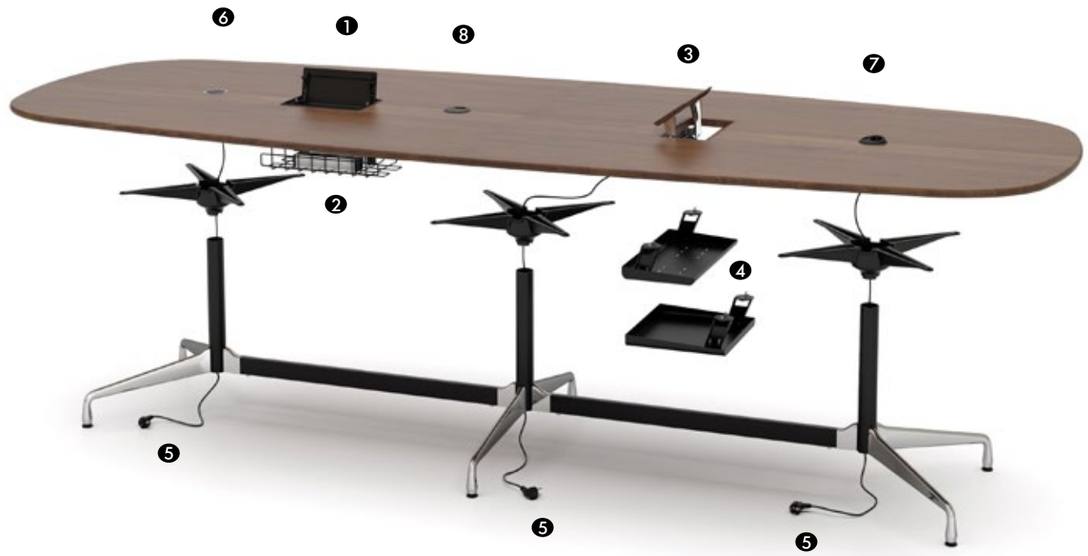

vitra.

Integrated electrification
The base for the Eames Segmented Tables has been revised and now allows for the discreet integration of contemporary electrification solutions. Cables are routed through the column so as not to affect the modularity of the base, while the visual appearance of the tables remains unaltered.

For further information regarding electrification or customer-specific solutions, please contact your Vitra sales representative.
* Please observe local electrical regulations!

Punto Wireless Charger

Punto Wireless Charger is an unobtrusive round electrification solution for the wireless charging of mobile devices. A trim ring in polished aluminium is mounted flush with the table top, while a soft rubber ring supports the device on the charger. The Punto Wireless Charger is Qi-certified with a voltage of 5 volts at 1.5 amperes (rated power output 7.5 watts) for charging all Qi-compatible devices. Comes with a 200 cm USB cable incl. mains unit. Punto Wireless Charger fits into an 80 mm cut-out.

Punto High

Punto High is a round electrification solution made of black plastic and contains a power socket and USB A/C charger (rated power output A 12.5 watts, C 15 watts and combined 25 watts). Supplied with an 80 cm cable equipped with a GST18 plug connector. Feed cables and connecting cables must be ordered separately. Punto High fits into an 80 mm cut-out.

Evoline Circle 80

Evoline Circle 80 in black or white plastic is a simple round electrification solution featuring a power socket, USB A/C charger (rated power output A 10.5 watts, C 10.5 watts and combined 21 watts) and cable outlet. Up to 6 cables can be routed to the desktop in predefined positions via the cover. Evoline Circle 80 is supplied with a 100 cm cable equipped with a GST18 connector. Feed cables and connecting cables must be ordered separately. Evoline Circle 80 fits into an 80 mm cut-out.

Cable outlet

The cable outlet is a rotating circular outlet in two parts, made of ABS plastic in soft light or basic dark, which allows cables to be routed to the desktop. The cable outlet fits into an 80 mm cut-out.

Doppio

Doppio is a cable flap made of powder-coated aluminium (recycled content up to 95%). The dual-access flap opens from both sides, making it an ideal solution for meeting tables. The table top remains free of bothersome cabling, while sockets are hidden from view and excess cable is stored in cable baskets.

When the flap is closed, cables can be routed through the slit to the desktop. The flap is equipped with a soft-close mechanism and can be removed entirely to allow full access to the electrification.

Accessories

Doppio cable basket

Tens Kit 4 outlet

Aletta cable tray (large)

Current Power 4 outlet

Aletta

The Aletta cable flap is embedded flush into the table – in the same material as the rest of the table top. Thanks to the damping mechanism of the polished die-cast aluminium supports, the Aletta flap closes gently and without noise.

The Tens Aletta outlet strips can be integrated without the use of tools, while excess cable lengths are held in the cable tray. Thanks to a slit, cables can be routed to the desktop even when the flap is closed.

Eames Segmented Tables Meeting
Customised table configurations

The base construction of Eames Segmented Tables follows an ingenious concept that allows the modular combination of different components. The segmented base consists of legs, spreaders, columns and table top supports. The legs and spreader can be connected to the column at different angles, creating modules suited to table tops of diverse shape and size. Tables of up to 10 m in length and 1.7 m in width can be created using the pCon Planner.

Wood and wood-based materials

Wood is a natural material that finds extensive use at Vitra, encompassing many different forms such as veneer, MDF, particle board, paper, cardboard, solid wood etc. Vitra procures wood and wood products originating in Europe and North American from European suppliers.

Particle board:

Wood-based materials used by Vitra, such as particle board, are processed from by-products of the wood, construction and furniture industries.

Veneers:

Complex industrial methods are used to produce sheets of wood veneer, which are further processed by hand.
In most cases, wood from a single tree is utilised for a piece of furniture to ensure the uniform appearance of all surfaces.
Vitra's veneers are finished with a protective lacquer; exposure to light will alter the colour over time.

Oak (Quercus robur) from Western Europe and/or Poland;
American walnut (Juglans nigra) from the USA.

Solid wood:

Wood is a natural material. Each piece therefore displays distinctive variations in grain, texture and colour, making each wooden furnishing unique.
Vitra has strict quality standards for the woods selected for its products and uses wood from several trees for the manufacture of a single furniture object made of solid wood. As a result, each piece has a lively and distinctive appearance but this also means that any wood sample can only approximate the structure and colour of the finished product. Deviations are therefore unavoidable because exposure to light permanently changes the wood sample.
The solid woods used by Vitra are mainly sourced in Europe and, depending on their application, have an oiled or lacquered finish that emphasises and protects the qualities of this natural material. However, exposure to light will alter the colour of all wood types over time.

Oak (Quercus robur) from Western Europe and/or Poland;
American walnut (Juglans nigra) from the USA.

A vendor declaration that certifies compliance with the European Timber Trade Regulation (EUTR) is required for each type of wooden material used in a Vitra product. Vitra also pays attention to the sustainability of the source of supply. In accordance with the Swiss declaration of origin of solid wood, the origin of the solid wood and veneers used in Vitra furniture is stated both in the price list and on the website www.vitra.com.

Environmental data

Aluminium is light and durable. Die-cast aluminium components by Vitra are principally made out of remelted alloys which are largely recycled material. When remelting recycled aluminium, there is an energy saving of 94% compared to the production of primary aluminium. Aluminium components are 100% recyclable.

Steel is a stable compound of iron and carbon with various added alloys. As the technical properties such as strength and elasticity can be adjusted according to the steel grade, the material can be used flexibly in many different forms. At the end of the product life cycle, steel components can be melted down and completely recycled.

Polyamide is a very strong thermoplastic synthetic material. With the addition of a small amount of new material, polyamide can be 100% recycled. In order to facilitate single-variety separation and recycling, all plastic components that are large enough are labelled according to ISO 11469:2000.

Wood and wood products: Wood is a renewable, natural raw material. Wood products like chipboard and MDF have the advantage that they can be processed more easily and flexibly than wood and unlike solid wood, do not deform in the case of fluctuating moisture levels. In the production of wood products we partly also use surplus wood from the wood industry and thus help preserve valuable resources. All the wood products used by Vitra satisfy the emission category E1 and therefore emit less than 0.1 ppm formaldehyde.

Material composition and recyclability

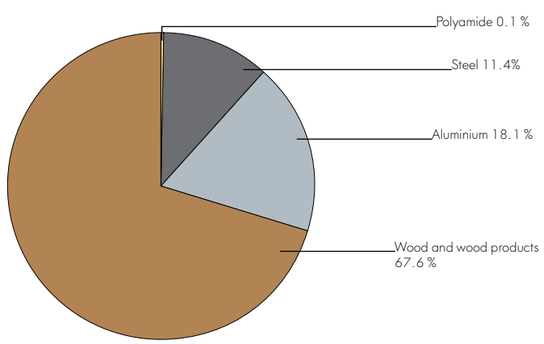

Eames Segmented Tables Meeting

Boat-shaped 2000 x 1150 mm,
light oak veneer, legs with polished finish, column in basic dark

Recyclability: Eames Segmented Tables are 37% recyclable when fully separated. For Vitra, recyclability means exclusively the reuse of materials, i.e. melting down and reutilising raw materials. Polyurethane and wood products, for example, cannot be melted down. However, these materials can be thermally utilised to generate energy or can be shredded and recycled as materials.

Recyclate content: Eames Segmented Tables contain 46% recycled material. The use of recyclates conserves valuable resources. Thanks to their recycled content, among other things, Vitra products can contribute to a good rating in certification programmes for sustainable buildings (for example LEED). We will be happy to assist you should you require more information on this topic.

Certificates

To offer transparency with regard to a product's most important environmental factors, Vitra provides certificates from external testing institutes. For this purpose, Vitra focuses on a selection of certificates that explicitly cover key elements of the respective product.

GS

With the GS seal for tested safety, a state-authorised inspection institute certifies the suitability and safety of the construction and monitors production at regular intervals.
